## DECLARATION

I, Cato Johansen, known as Haakcaton, hereby affirm that I am the originator and author of a conceptually grounded, structurally functional cognitive system, formerly titled "GLEMTE 248," and hereby reframed as the **Cognitive Resonance Framework (CRF)**.

CRF is not a metaphor nor a metaphorical system. It is a symbolic-cognitive integration schema designed to enable semantically structured intention through recursive symbolic dynamics. It is the result of independent research, self-generated experimentation, and internal cognition modeling.

This framework consists of six functional nodes, each designed to operate as both symbolic operator and cognitive processing field:

- **Glyphification:** Encode subjective and external data into abstract-symbolic packets (runic/schematic logic)
- **Linking:** Establish serial and associative resonance across identity layers (multi-modal cohesion)
- **Echo:** Recursive memory feedback (echoic pulse memory architecture)
- **Morph:** Context-sensitive adaptation (plasticity based on need-state and semantic load)
- **Thread:** Targeted intention weaving (goal-driven semantic propagation)
- **Emerge:** Self-structuring emergence from field dynamics (form from patterned recursion)

This is not a static invention, but a self-generative system capable of being applied within machine learning architectures, neural-symbolic reasoning systems, human-AI interface design, and cognitive feedback protocols.

I declare that this framework is:

- An original cognitive-structural invention
  - Usable in both conceptual and practical implementations (AI, symbolic computing, neurosemiotics)
  - Available under fair use and attribution-based licensing **with a clear expectation of ethical engagement and value recognition**, including potential economic participation for the originator in relevant applied or commercial use cases
-

## CONDITIONS OF USE

- This framework may be referenced, shared, implemented, and iterated upon in academic, applied, or commercial settings
  - Any derivative, integration, or adaptation must acknowledge the original name and originator
  - Misrepresentation of authorship, rebranding without attribution, or suppression of origin violates the license and ethical use terms
  - **Commercial or institutional implementations involving substantial use must consider compensating the originator in alignment with fair intellectual contribution principles**
- 

## CONTEXT AND INTENT

I developed CRF without funding, institutional support, or platform capital. It is created as a field transmission, from internal cognition to symbolic artifact, for use by those aligned with structural-resonance work.

This document exists as an anchor: to affirm authorship and ensure traceability in a field where uncredited appropriation is normalized. I make this available for those with sincerity, depth, and interest in resonant architecture.

This declaration is not a legal weapon, but a resonant boundary – and a request for recognition and support when the framework is used in ways that generate institutional, technological, or financial outcomes.

---

### **Signed:**

Cato Johansen (Haakcaton)
